(I) are used for diagnosis, e.g. in vivo detection/localisation of cancer, blood clots etc., also in vitro when immobilised on solid supports or blosensors and therapeutically, modified VLD may have binding affinity for drugs, steroids, pesticides, antigens, growth factors, tumour markers, cell or viral proteins. Modification of VLD improves solubility and alters binding specificity. Since VLD are derived from human proteins, the need for a humanizing step (to avoid adverse immune responses) is avoided, and modification also improves expression in
                                                                                                        Claim

                                                                             attractive potential reagents for therapeutic purposes. They provide a new class of antithrombotic agents, useful for the prevention of platelet-dependent thromb in diseased arteries, bypass grafts, dialysis etc., and can also be used as diagnostic reagents. Methods of inhibiting aggregation of platelets, of binding human platelet GPID alpha and of selecting a VH or VL region of an antibody that inhibits platelet aggregation are claimed. Fragments of the ScFV VH or VL chain, including CDR
                                                                                                                                                                                                                                                                                                                                       against platelet glycoprotein Ib (GPIb). The HID series of scFv was isolated from a human synthetic VH and VL scFv library on the basis of their binding to platelet GPIb. Whether displayed as surface proteins on a phagemid or secreted as free scFv by Escherichia coli, the HID scFv clones are capable of inhibiting von Willebrand factor dependent aggregation of platelets. The second of platelets of the scFv companies of platelets.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present sequence is that of complementarity determining 2 (CDR2) of the heavy chain variable region (VH) of human single chain antibody (scFv) Hib-3 (see AAY95219), which is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Isolated nucleic acid molecule
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Variable heavy chain; single chain antibody; scFv; human; HIb-3; glycoprotein Ib alpha; platelet; aggregation; antiaggregant; antithrombotic; thrombus; therapy; diagnostic; CDR2;

                                                                                                                                                                                                    The invention provides isolated antibodies, or antigen-binding portions, CC that are capable of binding to human interleukin-18 (II-18). The CC antibodies may be used to inhibit human II-18 activity in, and treat a CC disorder where II-18 is detrimental in, a human subject suffering from, CC inflammatory disorders (e.g., rheumatoid arthritis, Crohn's disease, CC (e.g., Huntington's chorea, Parkinson's disease, Albeimer's disease, and CC (e.g., Huntington's chorea, Parkinson's disease, Albeimer's disease, and CC (e.g., depression and schizophreia). Treatment with an anti-II-18 CC (e.g., depression and schizophreia). Treatment with an anti-II-18 CC (e.g., depression and schizophreia). Treatment with an anti-II-18 CC second agent selected from an antibody, or fragment, capable of binding CC human II-12, methotrexate, anti-tumor necrosis factor, corticosteroids, CC cyclosporin, rapamycin, FK506, and non-steroidal anti-Inflammatory CC depends. The present sequence represents an anti-II-18 antibody LT28 heavy chain CDR2 fragment.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match

                                                                                                                                                     The invention provides isolated antibodies, or antigen-binding portions, ct that are capable of binding to human interleukin-18 (IL-18). The cc antibodies may be used to inhibit human IL-18 activity in, and treat a cisorder where IL-18 is detrimental in, a human subject suffering from, inflammatory disorders (e.g., rheumatoid arthritis, Crohn's disease, inflammatory bowel disease, and osteoarthritis), neurological disorders (e.g., Huntington's chorea, Parkinson's disease, Alabimer's disease, and ctroke), heart failure, myocardial infarction, autoimmune diseases such as autoimmune hepatitis and autoimmune neutropeania, and mental disorders (e.g., depression and schizophrenia). Treatment with an anti-IL-18 cc (e.g., depression and schizophrenia). Treatment with an anti-IL-18 cc (e.g., depression and schizophrenia) or after administration of a second agent selected from an antibody, or fragment, capable of binding thuman IL-12, methotrexate, anti-tumor necrosis factor, corticosteroids, cyclosporin, rapamycin, FK506, and non-steroidal anti-Inflammatory cc chain variable region fragment.

                                                                                                                                                                           Q
                                                                                                                                                                                                                                                                                                              The invention relates to a novel purified preparation of a human CC antibody, which binds to a tissue inhibitor of metalloprotease-[(TIMP-1)] CC and neutralises a matrix metalloprotease (MMP)-inhibiting activity of CC and neutralises a matrix etalloprotease (MMP)-inhibiting activity of CC IMP-1. The antibody comprises a variable heavy chain (VHC)DR3 region and CC a variable light chain (VLC)DR3 region. An antibody preparation of the CC invention has hepatotropic, cytostatic, nephrotropic and cardiant CC activity. The human antibody is useful for decreasing an MMP-inhibiting CC extivity of a TIMP-1. It is especially useful for ameliorating the CC symptoms of a disorder in which TIMP-1 is elevated, e.g. liver CC symptoms of a disorder in which TIMP-1 is elevated, e.g. liver CC syndrome, lupus nephritis, glomerulosclerotic renal disease, idiopathic CC pulmonary fibrosis, benign prostate hypertrophy, lung cancer or colon CC cancer. The antibody is also useful for detecting a TIMP-1 in a test celevated. The present sequence represents a VHCDR1 region of an antibody of the invention

(I) are used for diagnosis, e.g. in vivo detection/localisation of cancer, blood clots etc., also in vitro when immobilised on solid supports or blosensors and therapeutically. Modified VLD may have binding affinity for drugs, steroids, pesticides, antigens, growth factors, tumour markers, cell or viral proteins. Modification of VLD improves solubility and alters binding specificity. Since VLD are derived from human proteins, the need for a humanizing step (to avoid adverse immune responses) is avoided, and modification also improves expression in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This sequence is a variant of the CDR2 of the variable-like domain (VLD) of the human cytotoxic T-lymphocyte associated antigen 4 (CTLA-4), used in the binding agent of the invention. The binding agent (I) comprises at least one monomeric VLD that is derived from a non-antibody ligand and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The specification describes a method for screening for functional polypeptides which bind a ligand. The method comprises contacting a creperroire of polypeptides with a generic ligand, and then screening selected functional polypeptides with a target ligand. The method permits the removal from a chosen repertoire of polypeptides, those which are non-functional, e.g. as a result of the introduction of frame-shift mutations, stop codons, folding mutants or expression mutants which would be or are incapable of binding to any target ligand. The method also permits the enrichment of a chosen repertoire of polypeptides for those polypeptides which are functional, well folded and highly expressed. The polypeptides which are functional, well folded and highly expressed. The polypeptides obtained can be used in consent clones selected after panning primary and somatic NNK libraries with 5 antigens (bovine ubiquitin, rat BIP, bovine histone,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The specification describes a method for screening for functional polypeptides which bind a ligand. The method comprises contacting a repertoire of polypeptides with a generic ligand, and then screening selected functional polypeptides with a target ligand. The method permits the removal from a chosen repertoire of polypeptides, those which are non-functional, e.g. as a result of the introduction of frame-shift mutations, stop codons, folding mutants or expression mutants which would be or are incapable of binding to any target ligand. The method also permits the enrichment of a chosen repertoire of polypeptides for those polypeptides which are functional, wall folded and highly expressed. The polypeptides which are functional, wall folded and highly expressed. The polypeptides obtained can be used in a chosen repertoire of polypeptides solected after panning primary and somatic NNK in the polypeptides which are functional to the polypeptides obtained can be used in a chosen repertoire of polypeptides solected after panning primary and somatic NNK in the polypeptides which are functional to the polypeptides obtained can be used in the polypeptides obtained can be use

                                                                                                  The specification describes a method for screening for functional polypeptides which bind a ligand. The method comprises contacting a repertoire of polypeptides with a generic ligand, and then screening selected functional polypeptides with a target ligand. The method permits the removal from a chosen repertoire of polypeptides, those which are non-functional, e.g. as a result of the introduction of frame-shift mutations, stop codons, folding mutants or expression mutants which would be or are incapable of binding to any target than the method also permits the enrichment of a chosen repertoire with the method also permits the enrichment of a chosen repertoire with the method also permits the enrichment of a chosen repertoire with the method also permits the enrichment of a chosen repertoire with the method also permits the enrichment of a chosen repertoire with the method also permits the enrichment of a chosen repertoire with the method also permits the enrichment of a chosen repertoire with the method also permits the enrichment of a chosen repertoire with the method also permits the enrichment of a chosen repertoire with the method also permits the enrichment of a chosen repertoire with the method also permits the enrichment of a chosen repertoire with the method also permits the enrichment of a chosen repertoire with the method also permits the enrichment of a chosen repertoire with the method also permits the enrichment of a chosen repertoire with the method also permits the enrichment of a chosen repertoire with the method also permits the method also permits the method complete with the method also permits the method complete with the m
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              selected functional polypeptides with a target ligand. The method permits the removal from a chosen repertoire of polypeptides, those which are non-functional, e.g. as a result of the introduction of frame-shift mutations, stop codons, folding mutants or expression mutants which would be or are incapable of binding to any target ligand. The method also permits the enrichment of a chosen repertoire of polypeptides for those polypeptides which are functional, well folded and highly expressed. The polypeptides which are functional, well folded diagnostic, prophylactic and therapeutic procedures. AAV02473-Y02525 represent clones selected after panning primary and somatic NNK libraries with 5 antigens (bovine ubiquitin, rat BIP, bovine histone, NIP-BSA and hen egg lysozyme).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             WPI; 1999-288302/24.

                                                                               The specification describes a method for screening for functional polypeptides which bind a ligand. The method comprises contacting a crepertoire of polypeptides with a generic ligand, and then screening selected functional polypeptides with a target ligand. The method comprises contacting a crepertoire of polypeptides, those contacts the removal from a chosen repertoire of polypeptides, those which are non-functional, e.g. as a result of the introduction of frame-shift mutations, stop codons, folding mutants or expression mutants which would be or are incapable of binding to any target ligand. The method also permits the enrichment of a chosen repertoire of polypeptides for those polypeptides which are functional, well folded and highly expressed. The polypeptides which are functional can be used in diagnostic, prophylactic and therapeutic procedures. AAY02473-Y02525 clibraries with 5 antigens (bovine ubiquitin, rat BIP, bovine histone,

                                                                                                                                                                                                 The specification describes a method for screening for functional CC polypeptides which bind a ligand. The method comprises contacting a CC repertoire of polypeptides with a generic ligand, and then screening CC selected functional polypeptides with a target ligand. The method comprises contacting a CC permits the removal from a chosen repertoire of polypeptides, those CC which are non-functional, e.g. as a result of the introduction of CC frame-shift mutations, stop codons, folding mutants or expression CC migand. The method also permits the enrichment of a chosen repertoire CC ligand. The method also permits the enrichment of a chosen repertoire CC of polypeptides for those polypeptides which are functional, well folded and highly expressed. The polypeptides which are functional, well folded CC and highly expressed. The polypeptides obtained can be used in CC diagnostic, prophylactic and therapeutic procedures. AAY02473-Y02525 CC represent clones selected after panning primary and somatic NNK CC libraries with 5 antigens (bovine ubiquitin, rat BIP, bovine histone, CC NIP-BSA and hen egg lysozyme).

CC The specification describes a method for screening for functional CC polypeptides which bind a ligand. The method comprises contacting a CC repertoire of polypeptides with a generic ligand, and then screening CC selected functional polypeptides with a target ligand. The method CC permits the removal from a chosen repertoire of polypeptides, those CC which are non-functional, e.g. as a result of the introduction of CC frame-shift mutations, stop codons, folding mutants or expression CC mutants which would be or are incapable of binding to any target CC ligand. The method also permits the enrichment of a chosen repertoire CC of polypeptides for those polypeptides which are functional, well folded CC and highly expressed. The polypeptides obtained can be used in CC diagnostic, prophylactic and therapeutic procedures. AAYO473-Y02525 represent clones selected after panning primary and somatic NNK CC Ilbrarles with 5 antigens (bovine ubiquitin, rat BIP, bovine histone, CC NIP-BSA and hen egg lysozyme).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Screening; functional polypeptide; ligand; non-functional; enrichment; single chain antibody; ScFv.

                                                                                                                                                                                                      The specification describes a method for screening for functional polypeptides which bind a ligand. The method comprises contacting a crepertoire of polypeptides with a generic ligand, and then screening selected functional polypeptides with a target ligand. The method permits the removal from a chosen repertoire of polypeptides, those which are non-functional, e.g. as a result of the introduction of frame-shift mutations, stop codons, folding mutants or expression mutants which would be or are incapable of binding to any target ligand. The method also permits the enrichment of a chosen repertoire of polypeptides for those polypeptides which are functional, well folded and highly expressed. The polypeptides which are functional, well folded and highly expressed. The polypeptides obtained can be used in crepresent clones selected after panning primary and somatic NNK clibraries with 5 antigens (bovine ubiquitin, rat BIP, bovine histone, with 5 antigens (bovine ubiquitin, rat BIP, bovine histone,

                                                                                                                                                                                                                                                                                                                                                                                    Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      B B
